

Lessons learned

- As a junior tester you face many challenges.
- Having passionate, helpful mentors throughout the testing phases it was very beneficial.
- Having clear, detailed requirements is very important.
- Understanding the main purpose of the application helps in writing test cases.
- Focus on the main functionalities is a must, but don't neglect the smaller features.
- Time management is very important.
- Work on your final project as you advance with the course, don't leave it at the end.
- Getting feedback throughout the testing phases it was very helpful.
- Don't overthink the test case plan. It always feels like something is missing or can be improved.
- Don't delete your drafts, it is better to keep a copy until the project is finished.
- Tell yourself "I am doing the best job in the world as I am helping in improving something".
- Put yourself in the end user's shoes.
- In order to grow as a tester study as much and as often as you can. Learning never stops.
